Document Name: Sprint 3 Report
Product Name: Wabi-Sabi
Team Name: Wabi-Sabi
Date: 07/22/19

Actions to stop doing:

1) At the end of sprint 3, our team was very satisfied with the work we accomplished and how we accomplished it. Our team members attended all meetings that their schedule allowed. Our team also kept in constant communication, which allowed us to finish all of the tasks we had in our updated sprint plan.

Actions to start doing:

1) The team should start coding as soon as possible. While all of our tasks were completed by the end of the sprint, our burn-up chart shows that we were behind schedule for most of the week. This would lower everyone's stress and allow more time to fix bugs and issues.
2) The team members should start speaking up sooner if there is a task they are having trouble with so that others can help and the team's time expectations can be adjusted accordingly.
3) The team should work on notifying the scrum master when they are working on a task or have completed a task so that the scrum master can updated the scrum board for everyone. As an alternative, the team members should update the scrum board as they finish tasks or begin working on them. This would allow the team to be more organized and not waste time.

Actions to keep doing:

1) The team should continue to communicate regularly. Our team has done a great job of being in constant communication which has allowed for bugs to be fixed quickly, new tasks to be assigned, and meetings to be scheduled daily.
2) The team should continue to write code together. Our team used a lot of paired programming during this sprint and the collaboration allowed our team to create a very stylish design and a product that works as intended.

Work completed:

1) As a user, I want to be able to run the site from a server rather than one of the team member's computers locally so that I can actually use the site.
2) As a buyer, I want to be able to add my shipping info so that I can receive my product.
3) As a buyer, I want the "Add to Cart" button to not have the bugs that it currently has so that I can use the site without errors.

4) As a user, I want an account page to update my info and view things specific to my profile so that I can make changes to my information.
5) As a buyer, I want to be able to purchase items and have them be removed from my cart and the site so that other people don't buy the same product and my cart is refreshed.
6) As a seller, I want to be notified when my product is sold so that I know where to ship and when to expect payment.
7) As a user, I want the user interface to be simple and intuitive so that I can use the site most efficiently.
8) As a new user, I want to be able to register with a notification of success so that I know my account has been created

Work that was not completed:

The team decided early on into the sprint that it no longer made sense to focus our time on trying to implement our last user story, "As a seller, I want to be able to upload multiple pictures so that buyers can see multiple angles of my product." We decided that this feature would be best left for a future version of our site. We made this decision based on the fact that we struggled a lot with getting AWS to host our images properly. We felt our time would be better spent fixing known bugs and making sure every aspect of the site was usable and user friendly.

Work completion rate:
Total number of user stories completed: **27 user stories completed**

Total estimated work hours completed: **30 hours**

Total number of days during sprint: **7 days**

Average user stories completed per day: **1.14 user stories**

Average ideal work hours completed per day: **4.3 hours**
